

S-Line geared cable winches

Technical details at a glance:

 The adjustable and sturdy safety grille provides safety for the operator and protects the tractor from damage.

 All Panzelt cable winches are equipped as standard with a **Forest radio system**.

 Two **holders for fuel canister and chainsaw** are useful and keep order on the tractor.

 Two **storage compartments** mounted on the side of the winch plate ensure order and are easy to reach.

 The **cable infeed roller with ball bearings** guarantees cross pulls up to 90°. The low position saves a deflection roller.

 Optimum protection against hand crushing in the event of operating errors is provided by the **TUTUM Anti-crushing protection pro**.

 Made of fine grain steels, the **sturdy shield** is torsionally stiff and provides support when pulled sideways.

 The optionally available **load lowering valve** allows the brake to be released in a controlled manner.

 An optionally available **cable payout** facilitates the cable pullout and reduces cable wear.

 The optional **cable distribution with cable inlet brake** ensures an optimised distribution of the cable and low wear.

 The standard **PPS controller** allows easy adjustment of the overlap.

 A standard **manual control** can be used in the event of problems with the **radio control**.

 The automated **trailing drum brake PTB** automatically brakes the cable when the drum is opened.

 The wide cable drum **minimises the loss of tractive force to a maximum of 21%**.

 The hydraulic pressure can be checked quickly and easily using the standard pressure gauge.

 Lateral **stand legs** facilitate mounting and dismantling of the winch and secure the operator.

 A reversing gear is optionally available for use at the front and rear of the tractor.
